Dr. Gansler will first briefly cover some of the major "drivers" of change (e.g. the national deficit, the changing demographics, the rapid changes in technology, the changing security concerns, and widespread globalization). Then he will discuss the impact these will have on national security business (particularly, how to "get more for less"). Areas such as: competition, logistics, network warfare, robotics, "spiral development," the Defense Industrial Base, and long-term research will also be discussed.
